| 针对铜电极加工用的圆鼻铣刀。采用优化的刀刃形状和tac涂层，可确保长时间进行持续稳定的高品质加工。<br>Ball end milling cutter for copper electrode machining. With optimized blade shape and tac coating, continuous and stable high quality processing is ensured over long periods of time. |                          |               |                       |                     |                             |                        |                                    |                    |                           |                                  |                   |                        |                     |             |               |             |                |                             |    |                         |      |
